# CLiKAPAD

Keypad voting systems for…

- Strategy Planning
- AGM voting
- Audience Polling

- Quizzes
- Event Feedback
- Opinion Gathering

- Training and Assessment
- Staff Surveys
- Risk Assessment

Software

ppvote

- Integrated with PowerPoint
- Intuitive and easy to use
- Instant voting results as graphs or text
- Can be branded to link seamlessly with your presentation

- Data stored after every vote
- Various graphing styles available
- Full colour palette for graphing
- Count votes being received or use a countdown timer

Seamless integration with PowerPoint allows freedom of design choice

Keypads

- Credit card sized and only 8mm thick
- 7 Segment LED for user feedback
- Always on, just press a number to vote
- Group by demographic or team

- Phosphorescent buttons for low light environments
- Only final answer counts. By default 1 keypad = 1 vote
- Can be assigned to a user and named
- Smartphone voting available

CLiKAPAD

How does it work?

Questions are shown on PowerPoint slides which can be designed to match the style of your presentation and can be written in any language. The vote settings and graph colours are easily selected using the CLiKAPAD menu within PowerPoint.

Each participant is given a wireless keypad. All they need to do is press a number to cast their vote. The CLiKAPAD receiver is connected to the organiser's laptop via USB. The receiver sends the voting results to the computer and the results can be instantly displayed on the PowerPoint slide.
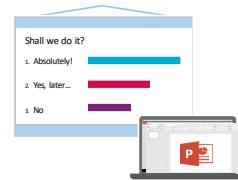

Alternatively, participants can be provided with a meeting code to allow voting via their mobile phone. The organiser's computer will need to be connected to the internet in order to receive online votes and a remote voting subscription is required. Keypads and online voting can be combined within the same meeting.

Add your voting questions to
your PowerPoint presentation

Ask your audience to vote
using their keypads

Immediately show results on
screen then export straight
to excel

ppvote Software

A powerful, versatile and easy to use audience response software package. Fully integrated into Microsoft PowerPoint. You can be up and running within minutes. If you can use PowerPoint, you can use ppvote.

- Show voting results instantly or hide results until later
- Compare before and after votes
- Allocate keypads to individual participant names

- Create teams and demographic groupings
- Show data split between groups instantly
- Show leader boards and quiz winners

- Export voting data to Excel
- Export data per demographic group
- Allow abstentions
- Apply your brand guidelines

Why CLiKAPAD?

Our focus is on providing the best possible experience for our customers through technical expertise, practical assistance and pure passion for our product. When you choose a CLiKAPAD system you are electing to work with voting experts who are determined to ensure your experience is a positive one.

Some of the available services are:

- Tailored online coaching
- Face to face coaching
- Voting slide design service

- Template slide creation
- Remote access to your PC
- Help at the end of the phone

- Software updates
- Question planning advice
- On-site technicians available

Warranty and Support

Our systems are sold with a 2-year return to base hardware warranty. Warranty does not cover batteries. Purchase pricing includes a 1-hour bespoke online coaching session; a set of custom voting slide templates using branding and colours defined by you; technical support by email and online chat (during our office hours); software updates and a 1-year licence upgrade giving access to ppvote Professional level functionality, as well as the ability to accept votes online from phones, tablets and laptops from up to 50 participants.

What are the system requirements?

The ppvote v5 software is compatible with Windows 7/8.1/10/11 (32 and 64-bit) with Office 2007/2010/2013/2016/2019/2021/365 (32 and 64-bit)

CLiKAPAD

Hardware

CLiKAPAD is designed, developed and manufactured in the UK.

Ease of use is at the heart of the CLiKAPAD design. To vote the participants simply press the number for their chosen option.

The keypads communicate over RF (radio frequency) and no WiFi is required.

Lanyards can be attached allowing delegates to wear their keypad.

- Credit Card Sized
- Buttons 0-10
- Just 34g / 1.2oz per keypad
- RF – no WiFi required

- Photo-Luminescent Keypad for use in low light environments (Glow in the dark buttons!)
- Multi receiver capability

- Can be personalised with your brand colours and logo
- Two year return to base warranty

The CLiKAPAD Plug and play USB receiver is just a little larger than the size of a deck of cards but is surprisingly powerful. We recommend using 1 receiver per 100 keypads for cabaret style room layouts and 1 per 200 keypads in theatre style environments.

Accessories

Our range of accessory keypads can be ordered separately, or you can include all three when you purchase a system.

Presenter – remote control

A remote control for your interactive presentations. Activate voting, jump to slides by number and even control your laptop volume. More than one person presenting? No problem, multiple Presenter keypads can be used.

Detector – find missing keypads

The CLiKAPAD Detect capability makes it easy to find keypads at the end of a meeting. No more searching under the debris left on tables. Use the Detector to make the missing keypads beep. The display will indicate whether you are moving nearer to or further from the missing keypad.

Sentry – alarm your exits

The Sentry helps to protect your keypad inventory by alerting you when keypads are being removed from the meeting area. The Sentry and the keypads will beep when keypads pass by the Sentry. For multiple exits use multiple Sentries.

Our systems are supplied in a high-quality canvas carry case. Each case holds up to 50 keypads plus the receiver. The foam insert in the case holds the equipment securely to prevent damage.

A system of 50 keypads packed in a carry case weighs less than 4kg and the case is less than 40cm long.

How 'techy' do you need to be to use the system? - The software is a PowerPoint add-in, so previous PowerPoint experience is all you really need. Coaching and support are available to get you up and running quickly and easily. Coaching is advised for those who wish to use advanced functions.

How quickly do the voting results appear? - It usually takes up to around 10 seconds for an audience to cast their votes. You may need to allow a little longer for large audiences or complex questions. Once the votes are received the graph is displayed instantly.

Do I need WiFi/Internet? - No, our system uses a USB receiver plugged directly into the PC. Internet is only required if you also wish to allow votes from smartphones or other devices which have a browser and internet connection, such as tablets and laptops.

How do I place an order and how long is the lead time? - All orders must be placed in writing. We need either a formal Purchase Order, online acceptance of the quote using the link provided when a quote is requested, or an email confirming that you wish to place an order. The system will be dispatched within 5 working days from receipt of payment.

What are the ongoing costs? - There are no compulsory ongoing costs other than replacement batteries. You have the option of a 1-year Maintenance Agreement or additional coaching if required.

What is the on-boarding package? - We pride ourselves on the quality of support we offer. Our On-boarding Package is to get you confidently using your new voting system quickly and easily. We provide online coaching via MS Teams, which is tailored to your specific requirements. We'll also create some template voting slides that use your branding and design preferences. Support via online chat (with a human not a robot) and remote PC access is included and you have access to the support email, our initial response time is no more than 1 working day. The package advanced voting functionality available in our Professional level software and online voting for up to 50 participants. The number of remote voters can be increased for an additional fee when required.

What is the warranty? - All systems have a 2-year return to base hardware warranty (excluding batteries). An extended warranty is available at a fee.

Is the licence annually renewable? No, the Essential software is a permanent license - you own the software and can use it indefinitely without further fees. Access to Professional level functionality is included for the first year as part of the onboarding package and available on an annual basis after year 1.

Can extra keypads be added later? - Additional keypads, receivers and bags can be ordered later to increase your system size.

What is the range of the receiver? - The maximum range of the receiver is 140m (460ft). However there are environmental factors which should be considered, which could impact range. Our support team can offer detailed guidance relating to maximising the range.

What is the maximum number of keypads you can use? - This is almost unlimited as multiple receivers can be used. Our keypads have been used at events with upwards of 2000 delegates.

Can I use it with my Mac? - The software is not compatible with Mac OS and will only run on a Windows operating system.

What is the expected battery life of a keypad? - With general usage the batteries will usually last around 12-18 months. Life span will depend on the quality of battery purchased.

What type of batteries and where can I buy them? - The keypads are powered by standard CR2032 round cells, cheap to buy and easy to source. Each keypad requires 2 cells.

CLiKAPAD

The ppvote software for CLiKAPAD can be installed on unlimited computers for use only with the specified voting system(s). All three licence levels are for use with the same hardware, so you can upgrade at any time.

ppvote is designed specifically for use with Microsoft Windows and Office. ppvote Essential users can subscribe to a maintenance agreement for access to the Professional and Matrix levels. All levels of ppvote software can also be purchased outright as a permanent licence.
